

Brainstorming & Idea Prioritization

Team ID: SWTID-2026-4623

Team Size:5

Project Name: Import Data using Transform Maps (Spreadsheet)

Step 1: Brainstorm and Idea Listing

Each team member discussed and listed possible ideas related to employee data management, spreadsheet import, data transformation, duplicate prevention, and reporting in ServiceNow.

S.No	Team Member	Idea / Suggestion	Category	Group No.
1	A. Nithya	Import employee data from Excel/Spreadsheet into ServiceNow automatically	Data Import	10
2	B. Ragavi	Use Transform Maps to map spreadsheet fields with Employee table fields	Data Transformation	10
3	P. Thanalakshmi	Use Coalesce to identify existing employees and prevent duplicate records	Data Integrity	10
4	P. Deepika	Create reports to analyze employees based on department and location	Reporting	10
5	R. Priyatharsini	Create a centralized dashboard to display employee information and analytics	Dashboard	10
6	A. Nithya	Validate imported records and track inserted, updated, and ignored records	Validation	10

Grouped Ideas

Group 1 – Automated Employee Data Import

- Import employee data from spreadsheet.
- Create an Import Set table.
- Map source fields to target employee fields using Transform Maps.

Group 2 – Data Integrity and Validation

- Use Coalesce with Employee ID.
- Prevent duplicate employee records.
- Update existing records when the same Employee ID is imported.
- Verify transform history and import status.

Group 3 – Reports and Dashboard

- Generate department-wise employee reports.
- Generate location-wise employee reports.
- Display employee details through a list report.
- Combine reports into an Employee Analytics Dashboard.

Step 2: Idea Prioritization

The grouped ideas were evaluated based on **feasibility** and **importance**, and the ideas required for the project were selected.

Group No.	Final Idea	Feasibility	Importance	Priority Selected
1	Automated employee data import using Import Sets and Transform Maps	High	High	Yes
2	Duplicate prevention and data validation using Coalesce	High	High	Yes
3	Employee reports and centralized dashboard	High	Medium	Yes

Final Selected Idea

Import Data using Transform Maps (Spreadsheet)

The selected project focuses on importing structured employee data from an external spreadsheet into ServiceNow. The data is first loaded into an Import Set table and then transformed into the Employee Test table using a Transform Map.

Coalesce is included to identify existing employee records using Employee ID, so repeated imports can update existing records instead of creating duplicate records.

Reports and an Employee Analytics Dashboard are also included to provide department-wise, location-wise, and employee-list information in a centralized view.
