

Problem-Solution Fit Canvas

Team ID: SWTID-2026-4623

Team Size:5

Project Name: Import Data using Transform Maps (Spreadsheet)

1. CUSTOMER SEGMENT(S) [CS]

- HR Administrators
- ServiceNow System Administrators
- Organizations managing employee information in spreadsheets
- Teams responsible for maintaining employee records in ServiceNow

2. PROBLEMS / PAINS + ITS FREQUENCY [PR]

- Manual employee data entry is time-consuming and error-prone.
- Repeated spreadsheet imports can create duplicate employee records.
- Incorrect field mapping can result in inaccurate or incomplete data.
- Difficulty in monitoring imported, updated, and ignored records.
- These problems may occur during every new employee data import or update cycle.

3. TRIGGERS TO ACT [TR]

- A new employee spreadsheet needs to be imported.
- Existing employee information needs to be updated.
- HR receives a revised spreadsheet with employee details.
- Duplicate records are noticed.
- Management needs employee data reports or monitoring.

4. EMOTIONS BEFORE / AFTER [EM]

Before:

- Concerned about manual data entry.
- Worried about duplicate or incorrect records.
- Uncertain whether all spreadsheet data is mapped correctly.

After:

- More confident about accurate employee data.

- Satisfied that existing records are updated instead of duplicated.
- Confident when reports and dashboards show the imported information clearly.

5. AVAILABLE SOLUTIONS – PROS & CONS [AS]

Available Solutions:

- Manual data entry into ServiceNow
- Direct spreadsheet-based data entry
- Basic import without proper transformation and duplicate handling

Pros:

- Simple for small amounts of data.
- Does not require complex configuration.

Cons:

- Time-consuming for larger datasets.
- Higher possibility of manual errors.
- Difficult to prevent duplicate records consistently.
- Limited monitoring of inserted, updated, and ignored records.

6. CUSTOMER LIMITATIONS [CL]

- Limited time for manual data entry and verification.
- Employee information is maintained in external spreadsheets.
- Large datasets can make manual processing difficult.
- Users need appropriate ServiceNow access and permissions.
- Data must follow a structured format for successful import.

7. BEHAVIOR + ITS INTENSITY [BE]

- HR/Admin users regularly prepare and update employee spreadsheets.
- They upload employee data into ServiceNow when new or revised data is available.
- They verify imported records after transformation.
- They check whether records were inserted or updated.
- They review reports and dashboards to monitor employee information.

Intensity: High, because employee data accuracy and duplicate prevention are important during repeated imports.

8. CHANNELS OF BEHAVIOR [CH]

Online:

- Microsoft Excel / Google Sheets
- ServiceNow Web Interface
- ServiceNow Import Sets
- Transform Maps
- ServiceNow Reports and Dashboards

Offline:

- Employee data preparation
- Spreadsheet review and validation
- HR/Admin discussions regarding employee information

9. PROBLEM ROOT / CAUSE [RC]

- Employee information is initially maintained outside ServiceNow in spreadsheets.
- Manual data entry requires repeated effort.
- Spreadsheet fields need proper mapping to ServiceNow fields.
- Repeated imports may contain existing employee IDs.
- Without Coalesce, existing records may be duplicated instead of updated.
- Manual review makes it difficult to monitor large amounts of employee data.

10. YOUR SOLUTION [SL]

Import Data using Transform Maps (Spreadsheet)

The proposed solution uses ServiceNow **Import Sets and Transform Maps** to import structured employee data from an external spreadsheet. The Transform Map maps spreadsheet fields to the Employee Test table, while **Coalesce on Employee ID** identifies existing records and updates them instead of creating duplicates. Reports and an Employee Analytics Dashboard are used to validate and monitor employee information, including inserted and updated records.

Solution Flow:

Spreadsheet → Import Set → Transform Map + Coalesce → Employee Test Table → Reports → Employee Analytics Dashboard
