Project Title: Import Data using Transform Maps (Spreadsheet)

Project Proposal (Proposed Solution) Report

Project Overview

Objective

The primary objective is to simplify and automate the process of importing employee data from an external spreadsheet into ServiceNow. The solution uses Import Sets and Transform Maps to map, transform, validate, and load employee records accurately.

Scope

The project covers preparation of employee data in Excel/Google Sheets, loading the data into a ServiceNow Import Set, creating a Transform Map, mapping spreadsheet fields to the Employee Test table, using Coalesce to prevent duplicate records, and monitoring the results through reports and dashboards.

Problem Statement

Description

Manual entry of employee information into ServiceNow is time-consuming and may lead to incorrect or duplicate records. Repeated spreadsheet imports also require proper field mapping and validation to ensure existing employee records are updated correctly.

Impact

Solving these issues will reduce manual effort, improve employee data accuracy, prevent duplicate records, and make imported employee information easier to validate and monitor.

Proposed Solution

Approach

The proposed solution uses ServiceNow Import Sets and Transform Maps to import structured employee data from a spreadsheet. The Transform Map maps source spreadsheet fields to the Employee Test table, while Coalesce using Employee ID identifies existing records and updates them instead of creating duplicates.

Key Features

- Import employee data from Excel/Google Sheets into ServiceNow.
- Use Import Sets as a staging area for spreadsheet data.
- Create Transform Maps for source-to-target field mapping.

- Use Mapping Assist/auto-mapping to configure field mappings.
- Use **Employee ID as Coalesce** to identify existing employee records.
- Insert new employee records and update existing records.
- Track inserted, updated, and ignored records through Transform History.
- Generate reports based on department, location, and employee details.
- Provide an Employee Analytics Dashboard for centralized monitoring.

Resource Requirements

Resource Type	Description	Specification / Allocation
Hardware	Computer/Laptop	Standard system capable of running a web browser
Memory	RAM	4 GB or above
Storage	Local storage	Sufficient space for spreadsheet files
Software	ServiceNow Platform	ServiceNow instance with required access
Spreadsheet Tool	Excel / Google Sheets	Used to prepare employee data
Browser	Web Browser	Chrome / Edge / Firefox
Configuration Tools	Import Sets & Transform Maps	Used for data import and transformation
Reporting Tools	ServiceNow Reports & Dashboards	Used for employee data analysis

Data Requirements

Data Source: External Excel / Google Spreadsheet

Data Format: Structured spreadsheet data

Employee Data Fields:

- Employee ID
- Employee Name
- Email
- Department
- Location

Target Table: Employee Test (u_employee_test)

Expected Outcome

The solution will provide a structured and repeatable process for importing employee data into ServiceNow. New employee records will be inserted, while existing records identified through Employee ID will be updated instead of duplicated. Reports and dashboards will help administrators monitor employee information and import results.

Solution Flow

Excel / Google Sheets → Import Set → Transform Map → Coalesce → Employee Test Table → Reports → Employee Analytics Dashboard
