

Coding& Solution

Team ID: SWTID-2026-4623

Team Size:5

Project Name: Import Data using Transform Maps (Spreadsheet)

Solution Summary

Field	Details
Repository Link / URL	Not applicable – ServiceNow configuration-based project
Programming Language(s)	ServiceNow configuration / JavaScript where applicable
Framework(s) Used	ServiceNow Platform, Import Sets, Transform Maps
Key Features Implemented	Spreadsheet employee data import, Import Set staging, Transform Map field mapping, Coalesce using Employee ID, insert/update handling, Transform History validation, employee reports, Employee Analytics Dashboard
Pending / Incomplete Features	None
Setup / Run Instructions	1. Prepare employee data in Excel/Google Sheets. 2. Open the ServiceNow instance. 3. Use Load Data to upload the spreadsheet. 4. Create/select the Employee Import staging table. 5. Configure the Transform Map and source-to-target field mappings. 6. Set Employee ID as Coalesce. 7. Run the Transform. 8. Verify inserted/updated/ignored records through Transform History. 9. Open Reports and Employee Analytics Dashboard to monitor the results.

Implemented Solution

The solution imports structured employee data from an external spreadsheet into ServiceNow using **Import Sets and Transform Maps**.

The main processing flow is:

Spreadsheet → Employee Import → Transform Map → Coalesce → Employee Test → Reports → Dashboard

The solution supports:

- New employee record insertion.
- Existing employee record updates.
- Duplicate prevention using Employee ID.
- Import and transformation validation.
- Department and location-based reporting.
- Centralized employee analytics through a dashboard.

Code Quality Checklist

S.No	Criteria	Status (Yes / No)
1	Code is modular and organized into functions / classes	Yes
2	Meaningful variable and function names are used	Yes
3	Code includes comments / documentation where necessary	Yes
4	Error handling is implemented for critical operations	Yes
5	The application runs without critical errors	Yes
6	Code is committed to a version control repository	No – ServiceNow configuration is maintained in the ServiceNow instance

Additional Notes / Comments

The project primarily uses **ServiceNow configuration components** rather than a standalone source-code application. Import Sets, Transform Maps, Coalesce, Reports, and Dashboards are configured directly within the ServiceNow platform. The solution has been validated by checking transformed employee records and Transform History, including inserted, updated, and ignored records.

The implementation is designed to be reusable for repeated employee spreadsheet imports while maintaining data accuracy and preventing duplicate employee records.
