

Project Executable Files

Team ID: SWTID-2026-4623

Team Size:5

Project Name: Import Data using Transform Maps (Spreadsheet)

Step 1: Submission Checklist

S.No	Item to Submit	Submitted (Yes / No / NA)
1	Complete source code (all files and folders)	NA
2	README / Setup Guide	Yes
3	requirements.txt / package.json / dependency file	NA
4	Database schema / seed files (if applicable)	NA
5	Environment configuration file (.env.example or similar)	NA
6	Deployed application URL (if hosted)	NA – ServiceNow instance access
7	APK / Executable binary (if applicable for mobile/desktop apps)	NA
8	Dockerfile / Containerization config (if applicable)	NA
9	Test files and test results	Yes
10	Demo video or walkthrough (if required)	To be attached if required

Step 2: File / Folder Structure

The project is implemented as a ServiceNow configuration-based solution rather than a standalone source-code application.

Project Structure:

Import Data using Transform Maps (Spreadsheet)

|

| — Employee Spreadsheet

| | — Employee ID

| | — Employee Name

| | — Email

	— Department
	— Location
	— ServiceNow Configuration
	— Employee Import (Import Set)
	— Sample Spreadsheet Import (Transform Map)
	— Field Mappings
	— Employee ID (Coalesce)
	— Employee Test Table
	— Validation
	— Transform History
	— Reporting
	— Employees by Department
	— Employees by Location
	— Employee List Report
	— Employee Analytics Dashboard

Step 3: Deployment / Access Details

Field	Details
Hosted / Deployed URL	ServiceNow project instance – URL to be provided by the team
Login Credentials (Demo)	ServiceNow evaluator credentials to be provided separately if required
Platform / Hosting Provider	ServiceNow Cloud Platform
Repository Link	NA – ServiceNow configuration-based project
Demo Video Link	To be attached if required

Step 4: Run Instructions

1. Open the assigned ServiceNow instance.
2. Log in using an authorized ServiceNow account.
3. Prepare the employee spreadsheet with the required fields:
 - Employee ID
 - Employee Name
 - Email
 - Department
 - Location
4. Navigate to **Load Data / Import Sets**.
5. Upload the employee spreadsheet.
6. Verify that the data is loaded into the **Employee Import** staging table.
7. Open the **Sample Spreadsheet Import** Transform Map.
8. Verify source-to-target field mappings.
9. Verify that **Employee ID** is configured as the Coalesce field.
10. Run the Transform.
11. Open **Transform History** and verify inserted, updated, and ignored records.
12. Open the **Employee Test** table and verify the imported records.
13. Open the configured Reports to view employee information by department, location, and employee.
14. Open the **Employee Analytics Dashboard** to view the consolidated results.

Step 5: Known Issues / Limitations

S.No Known Issue / Limitation		Workaround / Status
1	The project requires access to a configured ServiceNow instance.	Provide evaluator access to the ServiceNow instance.
2	Spreadsheet data must follow the expected field structure and format.	Validate Employee ID, Name, Email, Department, and Location before upload.
3	Performance metrics such as CPU, memory, and exact response time	Functional import and Transform History validation were completed;

S.No Known Issue / Limitation**Workaround / Status**

were not measured using a dedicated load-testing tool.

dedicated performance testing can be performed separately.
