

Scalability & Future Plan

Team ID: SWTID-2026-4623

Team Size:5

Project Name: Import Data using Transform Maps (Spreadsheet)

Current System Limitations

S.No	Limitation	Impact	Priority to Address
1	Spreadsheet must follow the expected field structure and format.	Incorrect or missing columns may cause mapping or transformation issues.	High
2	Performance metrics for large datasets have not been measured.	Actual behavior with very large spreadsheet imports is not quantified.	Medium
3	The solution depends on access to the ServiceNow instance and required user permissions.	Unauthorized or unavailable access can prevent data import and validation.	Medium

Scalability Plan

S.No	Scalability Aspect	Current State	Proposed Upgrade / Solution
1	User Load	Designed for HR/System Admin users managing employee imports.	Support more authorized users through appropriate ServiceNow roles and permissions.
2	Data Storage	Employee Import and Employee Test tables store imported and transformed employee data.	Optimize table usage and data management as the number of employee records increases.
3	Performance	Spreadsheet import and transformation are handled through ServiceNow Import Sets and Transform Maps.	Test with larger datasets and optimize mappings and transformation processes where required.
4	Security	Access is controlled through ServiceNow authentication and role-based permissions.	Extend role-based access and apply stronger data-access controls for larger organizational usage.

Future Roadmap

Phase	Planned Feature / Enhancement	Target Timeline	Expected Impact
Phase 1	Improve spreadsheet validation and standardize input formats.	Short Term	Reduce import errors and mapping issues.
Phase 2	Support larger employee datasets and optimize import/transform performance.	Medium Term	Improve scalability for increasing data volumes.
Phase 3	Enhance reports and dashboard with additional employee analytics and filters.	Medium Term	Improve monitoring and data analysis capabilities.
Phase 4	Explore scheduled/automated spreadsheet imports and enhanced access controls.	Long Term	Reduce manual effort and support wider organizational usage.
